

OLEV DOMESTIC CHARGE POINT SCHEME
(1st May 2018 until further notice)
INSTALLATION TERMS & CONDITIONS

Dear EV/PHEV driver,

The following information provides a guideline of what is considered to be a standard OLEV grant subsidised domestic home charge point installation:

Provided that the installation falls within the standard installation specification, installation costs should be:

Charge Point Type	Cost of install to Homeowner
16amp (type 2) charging socket charging unit (EVWP2016/OLEV)	£249.00 inc. VAT
32amp (type 2) charging socket charging unit (EVWP2026/OLEV)	£249.00 inc. VAT
16amp (type 1) tethered lead charging unit (EVWP1080/OLEV)	£279.00 inc. VAT
16amp (type 2) tethered lead charging unit (EVWP2080/OLEV)	£279.00 inc. VAT
32amp (type 1) tethered lead charging unit (EVWP1140/OLEV)	£279.00 inc. VAT
32amp (type 2) tethered lead charging unit (EVWP2140/OLEV)	£279.00 inc. VAT

Standard Installation Specification

- The chosen WallPod Charge Point
- A maximum run of 10 metres from source of supply (consumer unit) to charge point
- The property's consumer unit must be RCD protected and have a spare way for protecting the outgoing charge point circuit
- Cable to be surface mounted – clipped direct
- No ground works
- The property must have an earthing arrangement complying with current regulations
- The charge point must be fixed to the main property and able to utilise the property's earthing arrangement
- The property is within 75 miles (150 miles round trip) of an approved installer or their satellite installer
- The homeowner must comply with all current OLEV Domestic Scheme Ts & Cs (See OLEV website for Terms and Conditions)

Additional costs (to be negotiated prior to installation between the home owner and installer)

The following information provides a guideline of work that is considered to be beyond the standard installation specification:

- Cable runs exceeding 10 metres (chargeable per meter thereafter)
- The necessity to install a mini consumer unit c/w overload and fault current protection due to: a) the property's consumer unit having insufficient capacity/protection for the charge point circuit; b) the homeowner wishing to have an independent charge point circuit protection from the house consumer unit
- Any additional mechanical protection required for the cabling - i.e. trunking, conduit, etc.
- Any cable chasing requested by the homeowner
- Any ground works requested by the homeowner
- The necessity to introduce an alternative earthing system, i.e. an electrode/inspection chamber
- The property being further away than 75 miles (150 mile round trip) from an approved installer or their satellite installer's base
- Any additional or unusual works requested by the homeowner in order for the install to take place, i.e. gas and water pipe bonding, equipment clearing, plumbing work etc.

Please note:

- All charge points issued under the new OLEV scheme will contain a new set of unique serial numbers
- The new serial number will need to be quoted on the OLEV paperwork in order to validate your claim
- Removal of the serial number from the unit will invalidate the warranty on the product
- These serial numbers are only available on the authorised product (detailed anywhere the product code is followed by the '/OLEV' initials)
